

# Workshop consensus statements

- We feel the large attendance at this workshop is a reflection of the outstanding science opportunities. It demonstrates the enthusiasm and strength of our community.
- We encourage follow-on topical workshops organized by the various working groups.
- We encourage funding from DOE and NSF for R&D projects for the development of selected new technologies.
- We note the importance for users of infrastructure for FRIB including office and lab space, target fabrication facilities, data acquisition developments and standardization, and data storage.
- Operation at existing facilities including reaccelerated beams at ReA3 are important for science initiatives and the development of techniques.
- We continue to endorse the importance of  $> 6$  MeV/u reaccelerated beams and the early implementation of ReA12 and the corresponding experimental area.
